

GOSHEN RETREAT WOMEN'S HEALTH CENTER

Goshen Retreat Women's Health Center is dedicated to providing the most comprehensive breast care and treatment program in the region. Our innovative breast health services are designed by women to help our patients take control of their health. Our patients appreciate the personalized attention they receive which has allowed us to continue our national certifications and patient satisfaction ratings since our opening in 2003.

Dr. Laura Morris and Dr. Fiona Denham are board-certified surgeons and fellowship-trained breast disease specialists. Their expertise benefits patients who have either benign or malignant tumors as they offer the latest treatment and minimally invasive surgical options.

We offer the latest imaging technology including breast Tomosynthesis mammography with Computer Aided Detection (CAD), bone densitometry and high quality ultrasound diagnostics. Our patients benefit by receiving their results clearly, efficiently and faster than ever before.

Our personalized risk assessment program is designed to assist women in making sound decisions pertaining to breast health and breast cancer detection. Our women's health nurse practitioner will provide a thorough consultation and look at many variables to consider a patient's risk. The risk assessment will review personal health history and lifestyle, document family medical history, provide a clinical breast exam and breast imaging if necessary. Patients will receive an individualized breast health plan to implement risk reduction and early detection strategies. Genetic counseling and genetic testing are available for qualifying candidates.
